IF IT DOESN'T SAY MINTEX ON THE BOX...

...THEN IT'S NOT MINTEX IN THE BOX

As the saying goes, appearances can be deceptive. And whilst many friction brands make claims that their products are 'OE Quality', in truth few are.

But fit Mintex and you can be assured that you're making the right choice.

Mintex is developed, engineered and tested alongside the OE friction we supply to the majority of today's leading vehicle manufacturers. This means that by choosing Mintex, you and your customers will benefit from an aftermarket product that has much more in common with the original part than it looks.

So beware of cheap imitations, fit Mintex.
