

MRM1801 (FR)

Replacing M1144 road applications MRM1801 is a new medium friction compound specifically developed for performance road and light track day use.

Encompassing an average friction of 0.46 μ MRM1801 offers the renowned low temperature bite and performance of M1144 making it perfect for the daily commute. Take it on track however and MRM1801 really shines utilising our new thermal underlayer; increasing feel, high temperature performance and longevity. EEC Regulation 90 approved MRM1801 is also Eco friendly to Euro 4 standard, with no copper or other rare earth resources. It also takes less energy to manufacture.

Typical applications include:

- Performance Road Cars
- Track cars utilising OEM brake calipers

Note: The test and design data given has been selected from standard TMD Friction tests and indicates average results. TMD Friction accept no responsibility for the manner in which this specification is applied.
